

Yacht-based Fuel Training Course

Fuel quality assurance training is essential to maintaining an onboard jet fuel system for helicopter operations to always ensure you are delivering on-specification fuel and maintaining a system that is fit for purpose. It is for this reason, On Deck Aviation has partnered with Fuel Plus Consulting, to provide the option of an in-person training course for yacht and flight crew as well as the option of ongoing fuel management. We deliver the best in fuel quality assurance training.

The in-person fuel training is led by a subject matter expert who has been in the aviation fuel field for 35+ years. A 2 day course includes:

- Theoretical/Classroom Training
 - Coverage of fuel specifications, rules and regulations
 - Certificate of Analysis and Traceability of fuel and supply chain
 - Document and records review/creation
- Hands-on Training
 - Learning how take representative fuel samples from your equipment and test to understand its characteristics:
 - Clear & Bright Test
 - Fuel Haziness Rating
 - Free water using water finding paste
 - Undissolved water using chemical water detection kit
 - Density of fuel
 - MBG using FUELSTAT
- Custom Evaluation and Recommendations for Client Fueling Equipment, including Filtration
- Certificates of Completion
