

Aviation Fuel Training Course

Fuel quality assurance training is essential to maintain jet fuel system to standard to ensure you are delivering on-specification fuel and maintaining a system that is fit for purpose. Fuel Plus Consulting Inc. provides the option of an in-person training course for airport personnel as well as the option of ongoing fuel management. We deliver the best in fuel quality assurance training.

The in-person fuel training is led by a subject matter expert who has been in the aviation fuel field for 40+ years. Trainers are available to travel and provide the fuel training and fueling equipment inspection on demand and location as needed.

A 2-day course includes:

➤ Theoretical/Classroom Training

- Coverage of fuel specifications, rules and regulations
- Certificate of Analysis and Traceability of fuel and supply chain
- Fuel properties and contamination
- Fuel filtration and Quality Control
- Document and records review/creation

➤ Hands-on Training

Learning how take representative fuel samples from your equipment and test to understand its characteristics:

- Clear & Bright Test and Fuel Haziness Rating
- Density of fuel and Fuel Conductivity
- Undissolved water using chemical water detection kit and Free water using water finding paste, Hydro-Light to meet the max 30 ppm at point of refuelling
- Microbial Testing using FUELSTAT ®

- Evaluation of fuelling equipment and installation to current industry standards (JIG/IATA/CSA/CAP437)
- Technical Report (optional) with recommendations
- Certificates of Completion for course participants
- Post-training Technical support
